

Sage Brush

Wildlife

- Sage provides protection and cover for animals.
- Thick sage brush reduces grasses that animals eat.

Fire

- Sage Brush burns hot and fast.
- It doesn't re-sprout but relies on a seed source. Often times it is outcompeted by weeds after a fire.

How to Balance Fire Mitigation with Wildlife Habitat

- Clear sage brush 15 feet from house.
- Clear sage brush 5 feet on both side of roads.
- Patch cut sage to have clumps of sage and clumps of meadows (2.5 times height of sage between clumps).

Thinned

Thick, limited grasses
